COMPILED AND PUBLISHED BY

Henderson Directories Limited
Lethbridge and Winnipeg

Introductory

The present volume constitutes the 1929 edition of Henderson's Directory of Lethbridge. The work embodies a complete epitome of the civic, commercial, social and industrial interests and activities of the municipality. It is a modern Directory in all its parts and includes all the essential features which have been proven so satisfactory to our patrons in previous issues; these have been retained and amplified, and improvements have been added as suggested by experience in order to add to the value and usefulness of the Directory, thus fully meeting the requirements of patrons; the approbation and continued patronage accorded the work are constant incentives to better service.

The publication has had the benefit and advantage of the complete organization and resources of the publishers, and of the skill and experience of their corps of enumerators and compilers added to the courteous co-operation of citizens, in the production of the volume.

THE DEPARTMENT OF MISCELLANEOUS INFORMATION is included in pages 9 to 48h and contains data concerning City, Provincial and Federal Government offices, commercial organizations, cemeteries, churches (denominational and miscellaneous), colleges and schools, hospitals, homes and asylums, building exchange and associations, institutes and societies, libraries, military organizations, public schools, secret societies, etc.

THE STREET AND AVENUE GUIDE is embraced in pages 49 to 90; in this feature the names of all streets and avenues are arranged alphabetically, giving the location, number on the street and showing the occupant.

The intersecting streets are shown in the order that they come.

THE ADVERTISING occupies pages 1 to 8; this section of the Directory, printed on colored paper, includes numerous advertisements of the leading manufacturing, business and professional interests. A casual perusal of these advertisements will picture many interesting phases of the city's activities. They are not display advertisements, primarily, however, but rather are reference advertising at its best. The need for this kind of information readily at hand is very great, and the general appreciation of this need is evidenced by the liberal patronage the city Directory enjoys in many and varied lines of trade.

THE ALPHABETICAL LIST OF NAMES of citizens, business firms and corporations covers pages 91 to 264.

THE CLASSIFIED BUSINESS DIRECTORY commences at page 265 and exhibits the various manufacturing, mercantile, and professional names, compiled under headings appropriate to the class of industry or profession followed.

ADVERTISING LETHBRIDGE

An important function of the Directory is to set forth the characteristics and advantages of the city as a place of residence, as a business location, as an industrial site, and as an educational centre. The Directory acts as a mirror, reflecting all that is noteworthy in the city in the above respects. In order to spread this information regarding the city broadcast over the country, where they are readily available for reference use by the public. There they serve as perpetual advertisements of Lethbridge, for business men the country over realize that the City Directory represents the community as it really is.

The publishers take this opportunity of thanking the citizens for valuable assistance rendered in the way of furnishing information concerning themselves, their friends and their business interests for this Directory, and also the public-spirited and progressive business and professional men for support given in the way of patronage.

POPULATION

The directory estimate of population is based on the actual number of names contained in the book, which is multiplied by a common multiple to allow for the married women and small children whose names do not appear.

Based upon the names contained in the pages of this book, it is estimated that the population of Lethbridge is 14,052. This includes considerable territory beyond the city limits, which is canvassed in order that the names of all people doing business in Lethbridge may be obtained for the Directory.

Respectfully, The Publishers,

HENDERSON DIRECTORIES LIMITED.

July, 1929.

Lethbridge, Alberta

Lethbridge, Alberta, is a city of 14,052 inhabitants, situated fifty miles north of the international boundary line, 764 miles west of Winnipeg. It is a prairie city on the banks of the Old Man River, just east of the Canadian Rockies, on the Crow's Nest Division of the Canadian Pacific Railway, and is the commercial and agricultural centre and supply point of Southern Alberta and the Crow's Nest Pass coal fields. It is the centre of large coal mining operations. The development of coal mining in this vicinity is the largest in Canada, west of Nova Scotia.

The value of co-operation between town and country is nowhere more appreciated than in Lethbridge. The citizens, through the Board of Trade, have ever been active in the interest of the farmer, and anything that would assist in improving farming conditions in any way has always been strongly supported by the Board. Irrigation development, better roads, more convenient railways, proper educational facilities for children in the country are some of the movements in which the people of the city have been identified. It is not from a spirit of altruism that the people of the city have taken part in these and various other movements in favor of their neighbors in the country. In this inter-relationship between town and country both the farmer and the citizens have benefited in many ways.

Lethbridge is spoken of by the travelling public as being the most beautiful of all the prairie cities. It is clean and sanitary. It has three well kept parks covering 303 acres, the admiration of all. As the traveller steps off the train, the first thing that greets his view is a park or garden, covering ten acres, or four blocks, in the centre of the city. By getting on the street car and travelling eastward he passes through wide streets bordered by rows of trees and boulevards on each side, until he reaches Henderson Park, which covers 200 acres and contains a beautiful artificial lake nearly a mile long, on which there is sailing, rowing and swimming in the summer, and skating in winter.

The street railways system, owned by the city, stretches over eleven miles, and there are two miles of paved roads.

The lighting system is by electricity supplied by a municipally owned power plant, which is one of the most up-to-date and economical in Western Canada, the fuel used being supplied by a municipally-owned mine within a stone's throw of the plant. This enables the city to sell electric current for lighting and industrial purposes at very attractive rates.

The telephone system embraces the latest models of automatic phones, and is owned and operated by the Alberta Government. The water supply comes from the Old Man River, which has its headwaters in the Canadian Rockies, and affords a never-failing supply of water. The water comes through an up-to-date filtration system, and is then forced up the banks of the river into large mains and distributed throughout the city. The waterworks are owned and operated by the city.

The city government of Lethbridge has been progressive. Lethbridge is the first city in Western Canada to adopt the Commission form of government. Three commissioners with defined responsibilities, and giving their whole time to official duties, administer all the municipal affairs.

This city has a fine class of school buildings for the 2,900 pupils. The schools are all constructed of brick, with stone or cement foundations. They are equipped with all modern conveniences, and consist of eight public schools, four Roman Catholic separate schools, one manual training school, one kindergarten school and one high school. Pupils from the Lethbridge schools have demonstrated the efficiency of the tuition provided by taking premier place in the provincial competitions.

Several Churches, representing the various denominations, care for the spiritual needs of the people of Lethbridge. Many of the church buildings are quite imposing edifices that would be creditable to the people of a much larger and older city than Lethbridge. The L. Y. P. C. A. headquarters is a large up-to-date building, with club rooms, swimming pool, dormitories, etc.

The size and style of the public buildings, banks, and many of the office blocks indicates a faith in the future, shared alike by the governments of the Dominion and the Province, the financial concerns, the merchants and the public generally.

The discovery of natural gas has lately provided another valuable attraction for Lethbridge. The city is well piped, the pressure is strong, the quality good and the cost to consumers very low.

This city is situated in the centre of a vast agricultural and coal mining area, and affords ample opportunities for the investor in various lines, such as mining, agriculture, dairying, milling, clay products manufacture, manufacture of flax products, soap manufacturing and various other lines.

Lethbridge commands the eastern entrance to the Crow's Nest Pass through the Rocky Mountains. Between the city and the mountains, for some seventy-five miles, stretches a fertile plain, the western border of the great prairies. Across this plain the mountains are easily visible from Lethbridge. Eastward the same wonderful prairie stretches to Winnipeg, and southward to the international boundary. The agricultural products of this vast and fertile prairie require an

outlet to the Western United States, British Columbia, and through the Pacific Coast ports to the world's markets. The most important channel for this commerce is through Lethbridge and the Crow's Nest Pass.

At Lethbridge, mills, elevators, factories, wholesale houses and stores required for the storage, manufacturing, marketing and shipping of this growing business are being provided as the traffic develops. The Canadian Pacific Railway completed its lines through the Crow's Nest Pass to Vancouver in 1916. This route from Winnipeg to Vancouver through Lethbridge and the Crow's Nest is shorter than the line through Calgary and the Kicking Horse Pass. The line through the Crow's Nest to the Kootenay and Columbia Valley country of British Columbia and via Kingsgate to the States of Washington, Oregon, and California now serves a large and growing traffic.

Fruit, produce, forest and mineral products from three localities, the imported merchandise intended for consumption by the rapidly increasing population of the great prairies are finding Lethbridge the logical gateway and the most convenient point for storage, assembling, assorting, marketing, and reshipping.

Lethbridge is likewise in command of a most important railway line to and from the United States via Coutts. The freer trade relations between Canada and the United States constantly promote the importance of this traffic. Lethbridge will also presently command the short line via Weyburn and Portal to and from Northwestern Canada and the Dakotas, Minnesota, and the Central United States.

AGRICULTURE

In the year 1928, when Western Canada raised its largest crop, the first time that the prairie provinces have produced more than 500,000,000 bushels of wheat, Southern Alberta also raised its largest crop, though neither in grade nor average yield per acre has it come up to the record of 1915 when the average yield was just over 30 bushels and the average grade was two or a little better. The acreage under crop, however, was larger, and with a yield approaching 27 bushels on the average, the total production was well over 45,000,000 bushels, with a likelihood that the final shipping returns for the crop year will show that amount marketed on the Lethbridge railway division of the C. P. R.

Prices averaged ten to fifteen cents lower than for the 1927 crop, for which the Wheat Pool price was about \$1.42 per bushel, basis No. 1, Fort William. Indications early in 1929 were that the average on the same basis for the 1928 crop would probably be between \$1.25 and \$1.30 per bushel.

Grades on the whole, it is believed, will average close to the 1927 grade, though the quality of the wheat from a milling standpoint was higher. In the 1927 crop a great deal of tough and damp grain of

No. 3 grade was marketed, and this tough and damp grain was penalized in the grading. The 1927 crop was also below the Alberta average in protein content, this being true of all the wheat produced in Western Canada that year. In 1928 the protein content was higher, and there was practically no tough or damp grain, but due to heavy frosts in the first half of August, there was a wider spread in the grades making up the crop. There was more No. 1 wheat shipped from Southern Alberta in 1928 than in 1927—a very great deal more. There was also a good percentage of No. 2 and No. 3 straight grade. But owing to the frost there was a large proportion of four, five, six, and feed, and this was marked down very stringently in price. On the whole, however, the average was better than a year ago, and while the price was lower, the crop was harvested and threshed under almost ideal weather conditions, making the labor cost much lower than in the previous year. With a total marketable crop of some 45,000,000 as against 43,000,000 in 1927 on the Lethbridge railway division, it would appear that the slightly lower price would be offset and the returns to the farmer would total slightly higher, with a higher total wealth returning to the Lethbridge district as a result.

Following a severe winter, the spring of 1928 opened cool and dry. May was the driest month of May on record in Lethbridge. Crops sown early in the month germinated and made a fine showing. Those sown later in the month after the top-soil was dried out did not germinate, or germinated very unevenly, until the June rains came. June was one of the wettest months on record at Lethbridge with 6.74 inches of precipitation, resulting in splendid growth. Late sown fields, however, had a spotted or ragged appearance due to the difference in germination of the seed, and this was reflected throughout the season, some of the heads being ripe early enough to escape the frost of early August while others were frosted, thus producing a mixed and unsatisfactory grade. July and August were months of normal rainfall, and from early in September until the end of the year the precipitation was considerably less than average, so that harvesting was completed under ideal conditions.

The oat crop was not a success in Southern Alberta in 1928 due to the frost. Barley was fairly good, and the amount of rye was very much less than the 2,000,000 bushels shipped in 1927. In fact rye, owing to the two wet seasons of 1926 and 1927, almost disappeared from the map in 1928. This is natural, but it is also to be deplored because there is a definite place for rye in the drier sections of Southern Alberta as a feed and pasture crop. A small acreage should be grown on every farm as a feed crop for livestock.

Winter wheat, like rye, did not show up nearly so well in 1928 as in 1927, and the plantings of this crop in the fall of 1928 were very light. The winter wheat did not average so well in yield as did the 1927 winter wheat crop owing principally to the dry weather in May.

It is a crop, however, which generally shows up well as against spring wheat and a modified acreage of it would be beneficial on every farm. Oftentimes winter wheat will be almost ripe before the burning winds, which greatly depreciate a spring wheat crop, strike during the latter part of June or early July, and then the winter crop yields very much better than does spring wheat. This is a problem, however, which is being worked out by the farmers on the basis of actual experience, and no doubt winter wheat will eventually be fitted into its proper place in the scheme of Southern Alberta agriculture.

Another factor in agriculture in Southern Alberta today which is having its effect in increasing the average income of the farmer is the introduction of power farming. The year 1928 saw a tremendous quantity of power machinery—tractors, combined reaper-threshers and trucks—bought and put into use. One result was the breaking up of much new land formerly held for pasture for the farm stock and horses, and this brought about an increase in crop acreage. Another effect was that land 15 or 20 miles from a railway which had been considered too far from transportation to be farmed successfully, is now being brought under the plow because the truck has made the problem of transporting to the railway easier and less costly. It appears quite certain that this new development will add 15 per cent or more to the cropped area as compared with the past decade. During 1928 there were 551 combines engaged in harvesting the crop on the Lethbridge division; there were over 2200 trucks hauling it to the railway. The result, combining the factor of powerized machinery with good weather and good roads, was that the 1928 harvest, large though it was, was completed more rapidly than any in history and railway transportation facilities were unable to cope with the flow of grain within three weeks after the general start of harvest. It begins to appear that farm storage will have to be brought into more general use because it is evident that the railways cannot handle the wheat crop as fast as it will be offered in the future.

The combined reaper-thresher, with which are used the swather and pick-up as complementary machines, gave fairly good satisfaction in 1928. The uneven ripening of the grain crop, together with the heavy yield, make it a severe test on the reaper-thresher, but the out-turn of the wheat, together with the grade was practically identical from the threshing machine and the combine. It is safe to say that this method of harvesting on the prairie wheat belt is here to stay, and the result will be a great decrease in the amount of harvest labor which will be required. It is estimated in this connection that the 5000 combines used in Western Canada in the harvest of 1928 replaced more than 16,000 harvest hands, and form one of the reasons why the largest wheat crop in our history was harvested with a minimum of difficulty in the matter of labor supply.

MINING

The general prosperity of Western Canada during the year 1928 was reflected on the coal mining industry of the province as is shown by the fact that the total output of coal in Alberta reached the record figure of 7,334,179 tons as compared with 6,936,780 tons during the year 1927. The Lethbridge field produces a domestic coal and the demand for this class of coal is mainly controlled by three factors. The first is the population of the prairie provinces, the second is the prosperity, and consequently the buying power of that population, and the third is the weather. The immigration policy of the last few years has resulted in an increase of population, and the bumper crops have meant a liquidation of liabilities and a consequent prosperity and feeling of optimism which have naturally reacted favorably on the domestic coal market.

The season also was favorable in that the last quarter of the year 1927 averaged below normal temperatures. A large percentage of the coal produced during that period was therefore used for current consumption and the stocks at the end of 1927 were below normal. The result of this was that the domestic coal market was able to absorb a greater quantity of coal during the first quarter of the year.

The integration of these three conditions resulted in the largest total coal output in the history of the province, and the largest total output of domestic coal ever produced in Alberta.

During the year 1928 the Lethbridge district produced 795,855 tons of coal as compared with 695,139 tons during the year 1927. This is a gain of 100,716 tons, representing an increase of nearly 14.5%.

The following table shows the total yearly output of domestic coal from the whole province for the six year period, 1923 to 1928, together with the yearly outputs of the Lethbridge district for the period and their percentages of the total outputs:

Year—	Tl. output of Domestic Coal from Alberta Tons	Output of the Lethbridge District Tons	Output of the Leth. Dist. % of total from Alberta
1923	3,161,741	657,032	20.8%
1924	3,096,660	409,099	13.2%
1925	3,156,359	669,119	21.2%
1926	3,160,029	658,882	20.8%
1927	3,357,171	695,139	20.8%
1928	3,378,200	795,855	23.6%

The year 1924 was abnormal on account of a strike of 6 2-3 months' duration in the unionized coal fields of Alberta during which time a large part of the market was supplied with coal from non-union districts, and from Saskatchewan and the United States.

It will be seen that there has been a very encouraging upward trend in the market for Alberta domestic coal during the six year period, and the percentage figures show that the Lethbridge district has been able to obtain its share of the increase and maintain its proportion of the total output.

During the year 1928 the Federal and the Standard Mines which were operated by the C. S. Donaldson Coal Co. were acquired by the Cadillac Coal Co. Ltd. This company plans to develop the latter property as market conditions warrant until an output of 1000 tons per day is reached.

On March 16th, 1928, the Railway Commission issued an order providing for a special freight rate of \$6.75 per ton on domestic coal shipped from Alberta to Ontario for a period of three years, the time of the year during which this special rate was to apply being from April 15th to July 15th of each year. The order was not very definite in regards to switching charges and transfer charges from the lines of one railroad company to those of another and difficulties of this nature prevented the shipping of much coal from this district. These matters have now been adjusted and the order has been changed to extend the period to which the special freight rate applies so that shipments at this rate may now be made from January 15th to July 15th. This will allow coal to be placed on the Ontario market for immediate consumption during the winter months and it is hoped that this will enable the industry to find an additional market for coal.

In connection with these trial shipments to Ontario the Provincial government appointed an Alberta Coal Standards Board for the purpose of classifying the coals from the different domestic coal fields of the province as regards weathering qualities, etc., with a view to grading the different districts as to the desirability of the coals therefrom for shipment to Ontario. It is gratifying to note that Lethbridge district coal was graded No. 2, the only two coals which were placed in Class 1 being from areas where the production of domestic coal is comparatively small, namely Saunders Creek and Saunders Ridge.

DAIRYING

We have to report a 5% decrease in the butter production in this district for 1928.

Comparing this with the 12% decrease for the whole province and about the same decrease for the Dominion, we can count our decrease a gain.

This decrease which occurred during the summer months is mainly due to the good grain yields, and the good price of beef cattle. The winter production has doubled that of other winters, which shows our farmers are beginning to take dairying seriously. They find the returns for their crops are better when fed to good dairy cows, than

when marketed through the elevators. Some farmers are getting good returns on their frozen crops. They are finding that a daily cream cheque is better than a yearly grain cheque.

We hope our farmers will soon realize that mixed farming is the only solution to intensive and successful irrigation farming. Dairying is the keystone of mixed farming. The success of all other branches of mixed farming depends on a good dairy herd.

Alberta is 8,000,000 pounds of butter short of the production of four years ago. That is what has to be imported to fill our needs. That shortage could be produced right here in our own district if we were practicing mixed farming.

Official figures for the past 22 years in creamery butter production are:

Year	Creameries	lbs. of Butter	Selling Value	c per lb.
1920	53	11,821,291	6,555,509	55.45
1921	44	13,048,493	4,543,007	34.82
1922	54	15,417,070	5,126,843	33.25
1923	75	17,868,853	5,891,186	32.97
1924	89	22,339,857	7,059,630	31.60
1925	98	19,630,101	6,959,058	35.45
1926	99	19,912,466	6,568,280	33.
1927	100	16,425,000	5,748,700	35.
1928	100	14,425,000	5,048,750	35.

The total value of all dairy products for the last few years is:

1926	\$21,820,000.00
1927	20,750,000.00
1928	20,350,000.00

This total is 8.3% of the total value of all agricultural products of the province for 1928.

The quality of the cream is the best reported yet and the outlook as to quality is the best in history.

Government reports just printed read: "Favorable beef cattle markets combined with excellent crop prospects caused a considerable reduction in the number of milch cows and as a consequence in the volume of milk production.

"It is worthy of note, however, that there is an increase of 37% of milch yearlings over the number in June 1927.

"It is interesting too and perhaps significant to note that the creamery butter production for the last two or three years has shown a gradual relative increase in the southern sections of the province, and a corresponding decrease in the central and northern sections. Alberta produced more wheat in 1928 than all Canada in 1910 and in the course of time the Peace River country will harvest more wheat than this province in 1928".

IRRIGATION

The value of irrigation as an insurance against the eccentricities of the weather man was demonstrated to an unusual degree this year. The last part of April, all of May and the first week of June were unusually hot and dry, in fact there was practically no rain during this period, which resulted in the germination of grain being retarded so seriously that with the exception of that seeded early on the best of summer fallow and on the irrigated land, little or no growth took place until after the June rains. During this dry period heavy demands were made on the irrigation systems and many of the grain crops were irrigated up.

If, however, the weather man intended to give us a dry year he suddenly had a change of heart, for during the latter part of June and through July we were deluged with water, the rainfall, nearly eleven inches, actually drowning out the crops seeded in the depressions.

This combined with early frost in a few localities cut down the grade and yields of grain considerably.

Fortunately the fall was warmer than usual with about a normal rainfall which allowed the crops to be harvested under ideal conditions.

On the old A.R. & I project (now owned by the Canadian Pacific Railway Company) which furnishes water to about 123,000 acres lying south and east of the city of Lethbridge, there is a tendency to get into mixed farming to a greater extent. Honey producing and sugar beet growing are increasing. There were about 2500 colonies of bees on this project during this year, and this is an increase of 200% over last year. There has also been a decided increase of hogs, sheep and poultry on this project. Sheep show a 17% increase over last year. This is undoubtedly due to the sugar beet culture which furnishes the tops and pulp for feed.

The total value of the crops and other products consumed and marketed on this project this year was \$34.37 per acre.

Included in the area watered by this project are three Irrigation Districts. These are co-operative projects which own and operate their own canals.

One of these, the Raymond Irrigation District, covers 7000 acres, in the vicinity of the small towns of Stirling and Raymond. The sugar factory, located in the latter town, has just completed its fourth year of operation, having sliced about 38,000 tons of beets for which the farmer received \$8.16 per ton.

The second of these, the Magrath Irrigation District, covers 5000 acres in the neighborhood of the town of Magrath.

The third, the Taber Irrigation District, is the largest of the three, covering nearly 22,000 acres of irrigable land lying some thirty miles east of this city. The District grew about 2200 acres of sugar beets this year; that is one acre in every ten in the district produced

beets. This beet land yielded a gross return of about \$70.00 per acre. The total value of all crops produced in this District this year averaged \$29 per acre.

Across the river to the north and west of the city the Lethbridge Northern Irrigation District, which received water for the first time four years ago, continues to show steady progress. Although a co-operative project, it is still operating under the official trustee appointed by the Provincial government. The tendency to break away from the single crop system is pronounced. Practically every farm now has its stacks of alfalfa and with plenty of feed, dairy cattle, sheep and hogs are becoming numerous. The organization of an Accredited Flocks Association has given an impetus to the raising of good poultry. This organization, which started in the spring of 1927, with 19 members, has increased to nearly 100 and another 50 farmers are expected to enroll for 1929. The Association standardizes on Barred Rocks, the foundation stock being carefully chosen from the best flocks available in Western Canada. The members have recently formed a co-operative association and a thirty thousand egg hatchery is being erected. Each individual flock is under the supervision of a Dominion government poultry expert and the work is being fostered by the Lethbridge Northern Colonization Department.

Settlement of vacant lands in the district has practically been completed. The population now numbers nearly eight hundred families as compared with less than three hundred in 1924. Crop production has kept pace with the increased settlement and while the returns for 1928 are not yet available it is expected that the yield will be somewhat lower than 1927 due to the unusual weather conditions which prevailed throughout the province this year.

The five new towns which came into being in the spring of 1926 are now thriving centres of trade. The fact that sixteen new elevators were erected in the district in 1928 is evidence in itself of the progress of this new irrigation enterprise.

The Canada Land and Irrigation Company, Limited, enlarged the settled area of its project by the sale of 7700 acres of land during 1928. This brings the total area of irrigable land sold to approximately 29,000 acres, and with 4500 acres of irrigable land in the New West District makes a total of 33,500 acres served with water by the company.

Lateral extensions were made for an additional area of about 7000 acres of irrigable land for future settlement.

Approximately 15,000 acres of new land were served with water for the first time during 1928, and crop results, as a whole, were not up to the average of previous years, due to the unusual weather conditions and early frosts which prevailed throughout the province. The District was fortunate in having no hail.

An active interest is being manifested in co-operative marketing and in taking up mixed farming.

The United Irrigation District located west of Cardston is also progressing. Since the completion of the branch of the Canadian Pacific Railway serving this area the towns of Hillspring and Glenwoodville, located in this project, are becoming active business centres.

These irrigated tracts represent an area of about 250,000 acres of rich agricultural land on which there are about 2000 families.

The work of the Department of Colonization of the Canadian Pacific Railway and of the Colonists Service Association is worthy of the appreciation and support of all people who desire to see the development of the south. The immigrants that have been brought forward and placed by the help of these two organizations have contributed in no small way to the economic development of this part of the province. For the maintenance of the beet sugar industry here, a great deal of credit is due to the immigrant labor which these two organizations have supplied. From the beginning these immigrants have been employed each year for thinning, hoeing, weeding, cultivating and harvesting the beets. They have performed this work satisfactorily. The development of the beet sugar industry is of the greatest importance to Southern Alberta. This industry, more than anything else, will promote the development of the irrigated areas. The labor is one of the most important features in its success, and in seeing that it is available, as these organizations have done, they are making a valuable contribution to the economic development of Lethbridge and district.

LIVESTOCK

In the 1927 report of this Board it was stated that the livestock industry had recovered much of the ground lost during the post-war slump. Shipping figures for 1928 appear to bear this out.

Comparative figures for shipments from points on the Lethbridge division of the Canadian Pacific Railway during 1927 and 1928 show :

	1927	1928
Horses.....	8,138	9,022
Cattle.....	55,015	46,138
Sheep.....	66,995	83,223
Hogs.....	44,806	56,475
Totals.....	174,954	194,868

This shows a total gain of more than 20,000 head during the year, and constitutes the highest figure reached since the war. Taking into account animals delivered locally at various points but slaughtered for home consumption, the total livestock traded would run well over 200,000.

The sheep industry is the high light of the livestock branch of agriculture for 1928. Shipments show an increase of 17,000 or more than 25 per cent. That the sheep population of Southern Alberta is showing a steady growth appears to be borne out by these figures.

This growth, however, has mostly been accounted for by the increase in farm flocks on both dry and irrigated farms. For instance, during the latter part of 1928 some 2000 head were placed with farmers on the Lethbridge Northern irrigation district, while the number of flocks on the C. P. R.-Lethbridge project has been steadily increasing. Wool shipments from the Lethbridge area have been steadily creeping up, the total annual production now being in the neighborhood of 2,000,000 pounds. There is, however, great room for expansion in the sheep industry especially on wheat farms where a small band of sheep can turn a great volume of weeds and waste into profit without a great outlay of capital.

Hog production for the year shows a gain of about 25 per cent. Part of this increase may be accounted for by the fact that, due to the late threshing in 1927, many hogs were carried over and delivered in the spring. However, the hog industry is becoming more and more firmly established in Southern Alberta, though the hog population on the irrigated farms is not so large as it might be considering the possibilities for raising cheap pasture and coarse grains.

It is worth noting that considerable improvement was made in the Lethbridge stockyards during the past year which has greatly facilitated the handling of stock here. Lethbridge is more and more becoming a livestock sorting and selling centre, and the increase in stockyards accommodation has long been needed. The improvements, therefore, are appreciated.

MILLING INDUSTRY

During the past year the Milling Industry has kept pace with the increasing development of the district, and has had one of the largest turnovers in its history. They have found it necessary to build new storage to handle their output, besides building new warehouses in Calgary and Vancouver. They have also increased their wheat storage over 200,000 bushels.

The local flour finds a ready sale on the home market besides exporting to the European countries, British Isles and the Orient. In a year like this, when there is so much low grade wheat, it is possible to meet the Oriental market and do a nice business.

The local plant is preparing to increase their capacity this coming season and already have the machinery on the ground to proceed. The other mill in this city, which has been idle for the past eight years, is preparing to re-open, and have spent considerable time and money in putting the mill in shape. This should add to the output of the milling business in this district.

There is also a new Alfalfa Mill just installed in Lethbridge to grind alfalfa meal, which is a new commodity in this district and which we think will increase as it is better known.

OIL AND GAS DEVELOPMENT

During the past year Southern Alberta has made substantial progress in the quest for a commercial oil field although the long hoped-for "big pool" has not as yet been found. In 1927 the Skiff crude oil field, southeast of the city on the Lethbridge-Weyburn line of the C. P. R., was discovered by O. G. Devenish, veteran Alberta operator, and under an agreement which Mr. Devenish made with the Imperial Oil Company, the Imperial will drill six wells on various locations. One of these wells has been completed and abandoned. The producing sand was found as in the discovery well but it was too tight for the retention of oil. Devenish-Imperial No. 2 now drilling offsets the discovery well. It should be completed in February.

There is every indication that this well will be a producer. If so increased activity in the Skiff field may be looked for.

The Lethalta Oil Company, financed in Eastern Canada with Montreal as its headquarters, started a well during the year in the Chin field, 18 miles east of Lethbridge. This well was put down 2300 feet, 100 feet of oil-saturated shale being found. The well is at present shut down but may be completed early in the spring.

On the Beaver Dome in the border area the Madison Oil Company is putting down a well, and the Capitol Oils of Vancouver has a well under way on the same structure. Range Oil and Gas Company, developing the Rogers-Imperial gas field, have their No. 1 well down 1000 feet. It will be completed in the spring.

Commonwealth Petroleums Ltd. are drilling on the Milk River structure, Kotops Oils are rigging up in the Red Coulee field, six miles west of Coutts, while the Alberta Pacific Consolidated of Calgary has announced the drilling of a well in the Milk River field. To the north the Canadian Western Natural Gas Company failed with its Warner wildcat, although the company put down the hole to a depth of 4000 feet. Gas was encountered but not in commercial quantities.

In the Pincher Creek field the Henry L. Doherty Company of New York, through its Alberta subsidiary, is drilling its third well. Doherty No. 1 was abandoned and No. 2 met a similar fate when the crew gave up as hopeless a casing job with which they had battled for several weeks.

During the year considerable core drilling has been done in Southern Alberta fields by the Commonwealth Petroleums, Hudson's Bay-Marland Oil Company, Alberta Pacific Consolidated, and others. Valuable geological data has been disclosed by this surface exploration.

Late in December the Eagle Butte Oil Company of Medicine Hat and Independence, Kansas, reported that their No. 1 well in the Cypress Hills field, south of Medicine Hat, had blown-in with big production. The well when capped showed a flow of 20,000,000 cubic

feet of gas every 24 hours. The well will be deepened to the oil horizons. This well as it stands is an important discovery as it points to an entirely new and large gas field.

BUILDINGS

Buildings permits for the year ending Dec. 31st 1928, amounted to \$492,090.00 made up as follows:

Business Buildings	\$ 92,000.00
Residences (13)	45,000.00
Business Garages (2)	20,000.00
Collegiate Institute	137,000.00
Greenhouses (3)	15,000.00
Churches (3)	31,500.00
Theatre extensions (1)	35,000.00
Repairs, alterations, additions, etc.....	116,590.00

Total	\$492,090.00
-------------	--------------

The above shows an increase over 1927 of \$53,476.00. Of the buildings constructed during the past year the most outstanding is the new Collegiate Institute. This building is situated on 15th Street between 4th and 5th Avenues having an adequate campus and is a worthy addition to the schools already owned by Lethbridge School District No. 51.

It is unfortunate that such a small number of residences were constructed during the year (being two less than 1927.)

BEET SUGAR INDUSTRY OF ALBERTA IN 1928

The beet sugar crop in Southern Alberta in 1928 offers considerable encouragement to the farmers who are supporting the industry and to the Company which has been fostering the promotion of it. In 1927, due to the extreme climatic conditions which prevented the cutting and threshing of grain, labor on the beet harvest was very greatly delayed in many districts with the disastrous consequence that nearly 30% of the 1927 beet crop was frozen in the ground and could not be harvested.

Under these conditions grave doubts were expressed that the farmers of the irrigated districts would plant beets in sufficient quantity for the operation of the factory in 1928. However the high quality of the crop, which was harvested, produced an exceptionally high price for beets which gave to the farmers a return of \$8.16 per ton for 1927 crop. It appears also that the irrigation farmers are becoming thoroughly converted to the necessity of including cultivated rotation crop in their farm practise.

In any event a greater acreage was contracted and planted in 1928 than in any previous year. The conditions in the early spring and summer were very unfavorable for the germination and growth of the young plants. There was absolutely no moisture for about six

weeks from April 16th until June 5th. This condition produced a very scattered and spotted stand of beets. There was some irrigation during this period used to germinate the seed. A sudden reversal of climatic conditions commenced on June 6th and lasted until July 15th. During this period from ten to fifteen inches of rain fell in the various districts. On low and heavy lands the ponding of water and the absolute impossibility of performing the necessary weeding and cultivation combined ruined a good many acres of beets, resulting in a large abandonment of acreage. Since that time the season has been favorable and most of the beets which were saved have produced a satisfactory crop.

There is a splendid sentiment throughout the beet growing districts toward the crop; more fall preparation has been done this year than at any time since 1925. Some of the newer irrigated districts are now interested and making preparation for 1929, particularly on the Lethbridge Northern, and it would appear that there will be over 8000 acres planted to sugar beets next year.

The sugar content of the beets harvested during 1928 in Alberta was again exceedingly high but a little lower than in 1927. However, the beets ran over 17% sugar higher than figures reported from the States of Montana, Washington, South Dakota and some parts of Utah, Colorado and Nebraska. The harvesting season was such that every beet was dug from the ground and delivered in first class condition to the factory. The total tonnage of beets harvested was a trifle under 38,000 tons and beet growers have received, as their initial payment, \$7.00 per ton for beets. This is a very satisfactory price and there may be additional payments made under the contract. The beets harvested in 1927 produced a final payment of \$8.16 per ton.

The farmers fully recognize that in these irrigated districts they must have the benefits which come from the beet crop. These advantages are:

1. Proper crop rotation.
2. Heavier and cleaner grain crops.
3. The use of beet by-products—beet tops, beet pulp, betalasses.
4. Winter employment in feeding operations.
5. Greater land values.

There is every reason to believe that the acreage planted in 1929 will exceed any of the previous years.

Because of the high sugar content in beets, coupled with the reworking of Osmose sugar, the factory output was greater than in 1927, over 100,000 bags of sugar being manufactured.

The factory employs, during its peak of production, from 250 to 300 men.

It is estimated that the expenditures made yearly for this industry in the province of Alberta average over \$650,000.

The competition of Cuban refined granulated sugar has produced a depressed market in Canada and these importations of Cuban granulated appear to be increasing in volume every month. If the U.S.A. raises the sugar tariff, following this year's example set by Great Britain, it will produce an inevitable effect of increasing floods of tropical sugar into Canada depressing still further the domestic sugar industry. This matter is of vital importance to the irrigated farmer of Alberta who must increase his return per acre or lose, in many cases, his investment in land and water.

The feed value of beet tops, pulp and molasses produced on an acre of land is equal to that of any other crop. In other words, if the beet grower got, in return for his labor, only the tops, pulp and molasses, his land would be returning as much feed value as if hay or corn, wheat, rye, or barley had been the crop.

Now tops, pulp and molasses are merely by-products of the beet farm, and, if their feed value is equal to any other crop that can be produced, on the land, then the money received for the sugar content of the beet is additional profit. No other crop brings such returns.

In addition to all these beet values, it is the key product in any system of crop rotation for building and maintaining soil fertility.

The by-products from the Raymond Sugar Refinery are being eagerly sought by farmers and feeders throughout the province. The beet pulp, which is only produced in a wet state, has been contracted by beet growers living in the vicinity of the factory, and this year applications were made for over 40 per cent more than was actually produced. Betalasses, which is the by-product molasses resulting from the process, is now being marketed throughout Alberta and Saskatchewan in steel drums containing about 450 pounds each of this product, which is a heavy liquid syrup containing over 50 per cent. sugar with tonic salts that make it one of the best carbohydrate concentrates possible for feeding in Western Canada. This is being used with equal success for fattening hogs, sheep and cattle, for conditioning horses and increasing the milk flow among dairy cattle, especially during the winter.

BEES AND HONEY

The beekeepers of the district do not consider the season of 1928 a good "bee year." The estimated honey production for the year is 200 tons, or an average per colony of 100 pounds of extracted honey. This is, however, an average production that would be considered good in most honey producing localities. The number of colonies of bees kept has increased from 3200 to 4000 since the previous year.

Some sections near Lethbridge appear to be stocked almost to capacity with bees, but there is room for expansion in parts of the irrigated areas tributary to the city. As additional irrigated land is brought under development more alfalfa and clover will be grown and more bees kept. Undoubtedly a steady expansion of the bee industry will be experienced.

Most of the beekeepers are affiliated with the Alberta Beekeepers' Association which has its headquarters in Lethbridge, and several of the larger producers have established a selling pool.

POULTRY

The growth of the poultry industry in the district continues steadily. Flocks of laying pullets of from 100 to 500 are now quite common on the farms while a few large commercial plants are in operation. One noticeable feature of this development is the satisfactory type of buildings that are being provided for the farm flock of hens.

The demand for baby chicks has grown to such an extent that two large hatcheries are being established in Lethbridge to take care of part of this business. The Lethbridge Northern Accredited Flocks Association are establishing a co-operative hatchery and broodery for the use of their members, and the Winter Egg Poultry Farm are installing a large electric incubator for commercial hatching.

The success of the Lethbridge Northern Accredited Flocks Association has caused the poultry raisers not living on that project to desire a similar organization. While such a complete organization may not be feasible at present for the entire area tributary to Lethbridge, some kind of a central selling agency will undoubtedly be formed.

HAY AND FORAGE CROPS

During the year 1928 the Province of Alberta produced one of the largest hay crops in its history, although our records show that the hay crop in the Lethbridge-Coaldale district was fully 25% below that of the previous year. This was caused by farmers either plowing up their land or converting same into pasture for sheep and hogs.

Although all the statistics are not available at this time, from information received from the Canadian Pacific Railway their project this year produced a total of 26,844 tons of hay of all kinds, as against 33,739 tons of the previous year. Looking to the future, our hay tonnage is likely to increase just as fast as our irrigation projects develop.

This Publication is the Product of a Member of

Thus assuring you the ultimate service that skill and care can produce in the way of City Directories or other reference media, and providing protection against fraudulent advertising schemes which operate under the name of Directories.

The following "Standards of Practice," adopted at the inception of the Association of North American Directory Publishers in 1898, and strictly adhered to over the years, is your guarantee of satisfactory Directory Service.

The publisher of a Directory should dedicate his best efforts to the cause of business uplift and social service, and to this end pledges himself:

1. To consider, first, the interest of the user of the book.

2. To subscribe to and work for truth, honesty and accuracy in all departments.

3. To avoid confusing duplication of listings, endeavoring to classify every concern under the one heading that best describes it, and to treat additional listings as advertising, to be charged for at regular rates.

4. To increase public knowledge of what Directories contain; to study public needs and make Directories to supply them; to revise and standardize methods and classifications, so that what is wanted may be most easily found, and the Directory be made to serve its fullest use as a business and social reference book and director of buyer and seller.

5. To decline any advertisement which has a tendency to mislead or which does not conform to business integrity.

6. To solicit subscriptions and advertising solely upon the merits of the publications.

7. To avoid misrepresentation by statement or inference regarding circulation, placing the test of reference publicity upon its accessibility to seekers, rather than on the number of copies sold.

8. To co-operate with approved organizations and individuals engaged in creative advertising work.

9. To avoid unfair competition.

10. To determine what is the highest and largest function of Directories in public service, and then to strive in every legitimate way to promote that function.
